

Summary – this is a swift cli that adds window management using vim commands.

Features:

- Help menu - display the keybinds (?)
- Window Movement:
 - h - left
 - j - down
 - k - up
 - l - right
- Rescale (using same keys as above + shift)
- Quickly arrange the last used windows into a preset arrangement
 - Last 3 windows (big left, small top right, small bottom right)
 - Last 4 windows (corners)
 - Last 2 windows (vertical split screen [horizontal = use \$OPTION_KEY])
- Swap position of current window with the last used window
- Colon Commands
 - Give me some ideas ;)

Unique features:

- Press CTRL to slow down window movement and rescale keybinds
- Change modes with ctrl-:

Modes:

- Move: ignore all keybinds and only use them to execute our defined keybinds
- Insert: normal mac usage
